"Herbert" Raspberry

THE QUEEN OF ALL RASPBERRIES

The Heaviest - Yielding Raspberry in Existence

Originated at Ottawa, Canada about Fourteen Years ago

THE HERBERT

est in flavor of any Red Raspberry. It is a great yielder, a vigorous grower, and was never known to be injured by extreme temperatures, having withstood unprotected the severest temperature north of Cobalt.

At the Central Experimental Station, Ottawa, Canada, the average yield of the "Herbert" Raspberry for three years was 220 bushels per acre, or about 7,500 quarts per acre. This Raspberry sold to the trade at Owen Sound during the season 1910 at 12½ to 15¢ per quart and in the seasons of 1911, 1912, 1913 and 1914 for 15 to 18¢ per quart and continued yielding from about the 15th of July to the 15th of Aug. With me in the seasons of 1911, 1912, 1913 and 1914 it yielded at the rate of 4,500 quarts per acre, other varieties yielding only about $\frac{1}{4}$ as much.

Added to its wonderful yielding quality is its excellence in color - a rich, glowing crimson, which is the color the market demands, and also its large size and rich, melting flavor.

The demand for this Raspberry is increasing rapidly and the person who gets the largest plantation of the "Herbert" may consider himself fortunate.

Owen Sound imports about $\frac{1}{3}$ of all the Raspberries used in this district and it is evident there is a good opening for increased plantations. The local grower has no freight to pay, thus making his profit so much the greater - \$1.25 per dozen, \$5.00 per 100, \$30.00 per 1000. Small crops can be grown the first year. One planting will hold out about 7 years. 100 plants will supply all that a family of ten can eat for every heating day consumption as well as for family canning and a few hundred boxes to sell or give away.

Herbert, the Queen of all Raspberries, \$1.25 per dozen, \$5.00 per 100, \$30.00 per 1000.
